Disclaimers

This presentation contains “forward-looking statements” within the meaning of the federal securities laws, which statements are subject to substantial risks and uncertainties and are based on estimates and assumptions. Other than statements of historical facts, all statements included in this presentation are forward-looking statements, including statements concerning our plans, objectives, goals, strategies, future events, plans or intentions relating to product candidates, potential market opportunities, estimates of market size, estimates of market growth, estimates of market share, the potential clinical benefit, complementary benefits to other therapies, effect on histology and safety and tolerability profile of pegozafermin (formerly BIO89-100), the clinical potential of pegozafermin, potential indications for pegozafermin, the association of clinical data with potential clinical benefit in other indications, the anticipated timing, design, endpoints, and conduct of our future and ongoing clinical trials for pegozafermin, including the expected topline results from the Phase 3 trial in SHTG, the timing of anticipated milestones, the timing of regulatory meetings, the timing and likelihood of success, plans and objectives of management for future operations and future results of anticipated product development efforts and our liquidity and capital resources, including our cash position. In some cases, you can identify forward-looking statements by terms such as “may,” “might,” “will,” “objective,” “intend,” “should,” “could,” “can,” “would,” “expect,” “believe,” “design,” “estimate,” “predict,” “potential,” “plan” or the negative of these terms, and similar expressions intended to identify forward-looking statements. These statements involve known and unknown risks, uncertainties and other factors that could cause our actual results to differ materially from the forward-looking statements expressed or implied in this presentation including those described more fully our most recent Form 10-K and Form 10-Q under the caption “Risk Factors” and elsewhere in such report and in other subsequent disclosure documents filed with the SEC.

We cannot assure you that we will realize the results, benefits or developments that we expect or anticipate or, even if substantially realized, that they will result in the consequences or affect us or our business in the way expected. Forward-looking statements are not historical facts, and reflect our current views with respect to future events. Given the significant uncertainties, you should evaluate all forward-looking statements made in this presentation in the context of these risks and uncertainties and not place undue reliance on these forward-looking statements as predictions of future events. All forward-looking statements in this presentation apply only as of the date made and are expressly qualified in their entirety by the cautionary statements included in this presentation. We disclaim any intent to publicly update or revise any forward-looking statements to reflect subsequent events or circumstances, except as required by law.

We obtained the industry, market and competitive position data used throughout this presentation from our own internal estimates and research, as well as from industry and general publications, and research, surveys and studies conducted by third parties. Internal estimates are derived from publicly available information released by industry analysts and third-party sources, our internal research and our industry experience, and are based on assumptions made by us based on such data and our knowledge of the industry and market, which we believe to be reasonable. In addition, while we believe the industry, market and competitive position data included in this presentation is reliable and based on reasonable assumptions, we have not independently verified any third-party information, and all such data involve risks and uncertainties and are subject to change based on various factors. This data involves a number of assumptions and limitations, and you are cautioned not to give undue weight to such estimates.

This presentation discusses product candidates that are under preclinical or clinical evaluation and that have not yet been approved for marketing by the U.S. Food and Drug Administration or any other regulatory authority. Until finalized in a clinical study report, clinical trial data presented herein remain subject to adjustment as a result of clinical site audits and other review processes. No representation is made as to the safety or effectiveness of these product candidates for the use for which such product candidates are being studied.

Corporate Highlights

Potential best-in-class FGF21 in three Phase 3 trials, each of which represents a significant market opportunity*

Targeting metabolic dysfunction-associated steatohepatitis (MASH) with advanced fibrosis

- Robust fibrosis data with favorable tolerability and dosing convenience
- Positive long-term data; additive benefits in patients on background GLP-1 therapy
- Phase 3 trials for F2-F3 and F4 ongoing, pursuing accelerated approval using histology

Synergistic severe hypertriglyceridemia (SHTG) program

- Substantially de-risked Phase 3 trial with topline data anticipated in 2H 2025

Commercial liquid product presentation and commercial-scale manufacturing available

Strong balance sheet with ~$440 million in cash as of Dec. 31, 2024[1]

Highly experienced leadership team with track record of execution, well-positioned for Phase 3 trials and commercialization*

* If approved

[1] Preliminary unaudited

Opportunity in MASH

Pegozafermin Offers Potential Best-in-Class Therapeutic for Advanced MASH

REVERSES **LIVER FIBROSIS**

RESOLVES **MASH**

REDUCES **LIVER FAT**

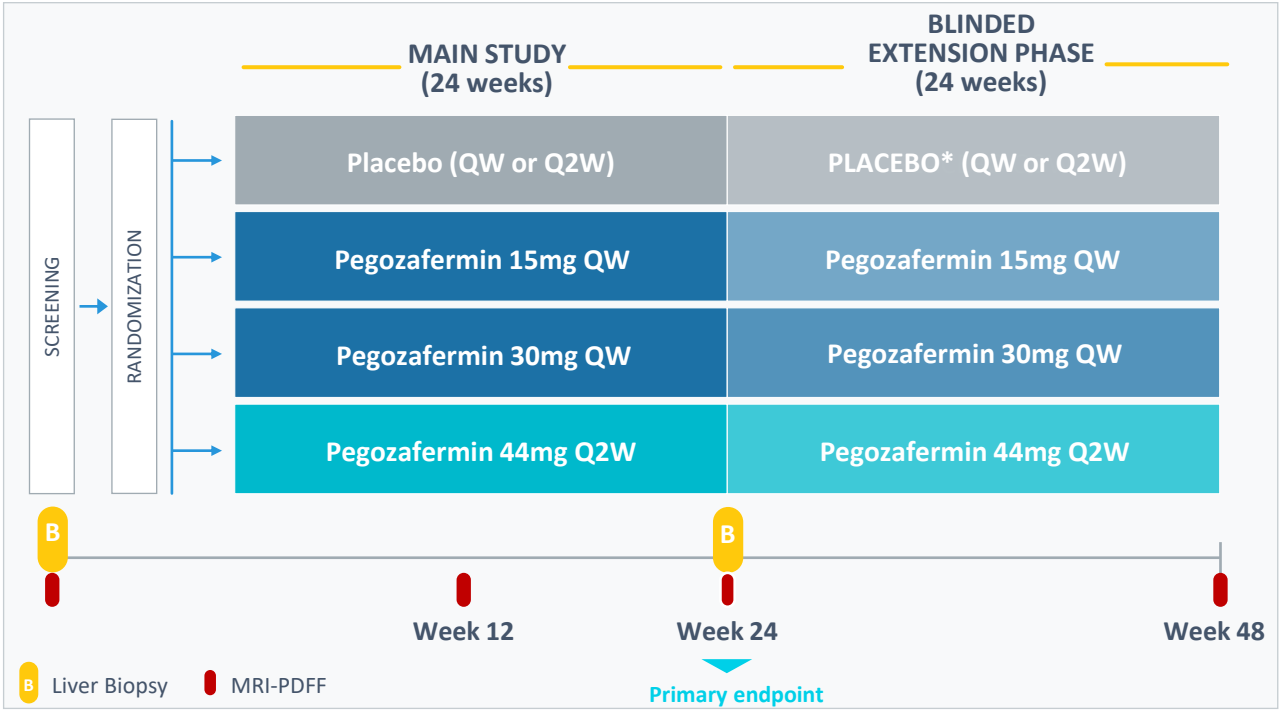
IMPROVES **INSULIN RESISTANCE**

IMPROVES **DYSLIPIDEMIA**

FAVORABLE TOLERABILITY & CONVENIENT DOSING to improve patient persistence and compliance

89bio * If approved

ENLIVEN Trial Evaluated Weekly (QW) and Every-Two-Week (Q2W) Dosing in Non-cirrhotic Patients



PRIMARY ENDPOINTS

- ≥1-stage fibrosis improvement with no worsening of MASH[1]
- MASH resolution with no worsening of fibrosis[2]

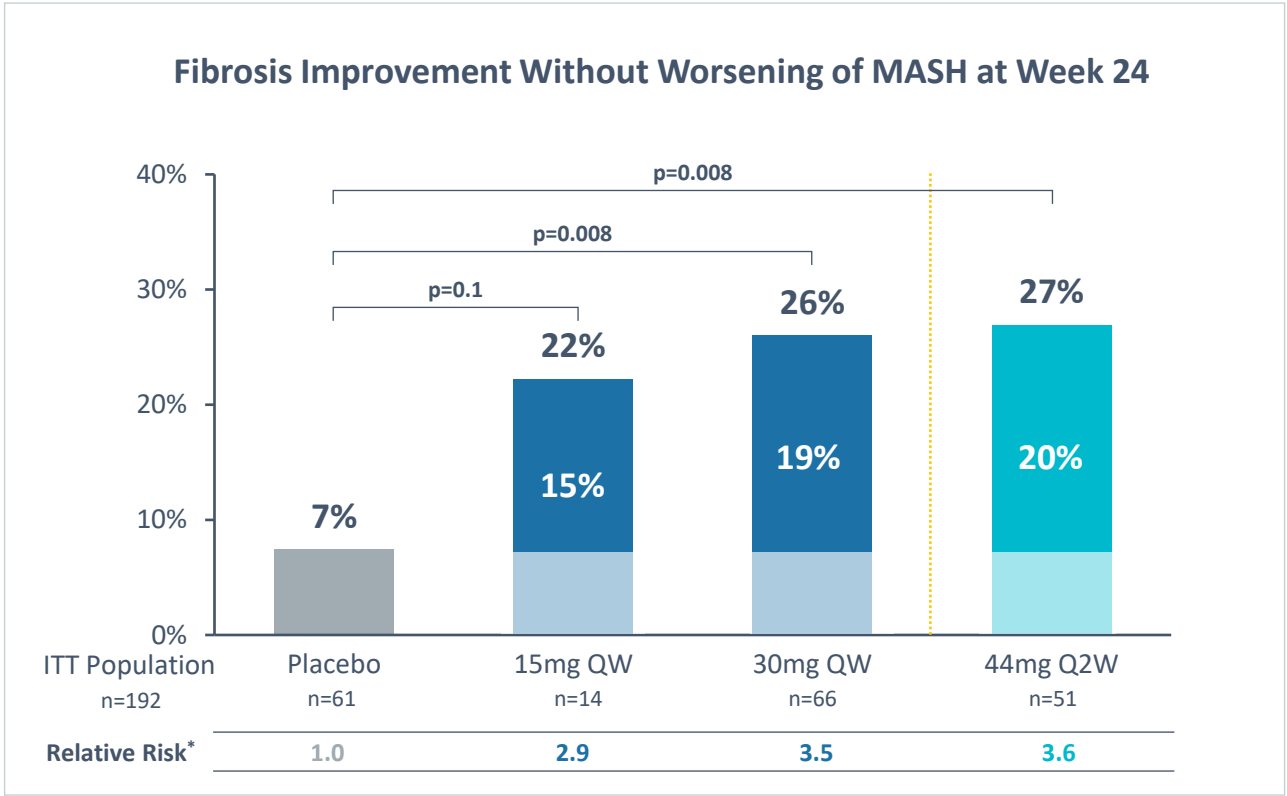
KEY SECONDARY EFFICACY ENDPOINTS

- ≥2-point change in NAS with no worsening of fibrosis
- Non-invasive liver markers (liver fat, liver injury, fibrosis markers)

[1]Improvement in liver fibrosis by ≥1 stage and no worsening of steatohepatitis defined as no increase in NAS for ballooning, inflammation, or steatosis (FDA draft guidance).
[2]Resolution of steatohepatitis is defined as absent fatty liver disease or isolated or simple steatosis without steatohepatitis and a NAS score of 0-1 for inflammation, 0 for ballooning and any value for steatosis (FDA draft guidance).
*Some placebo patients were re-randomized in the extension phase to receive pegozafermin.
NAS, NAFLD Activity Score; MRI-PDFF, Magnetic resonance imaging-estimated proton density fat fraction; QW: Every week; Q2W: Every 2 weeks

Pegozafermin Demonstrated Statistical Significance on Fibrosis Improvement at 30mg QW and 44mg Q2W Dose

WEEK 24



Treatment with PGZ Delays Progression to Cirrhosis

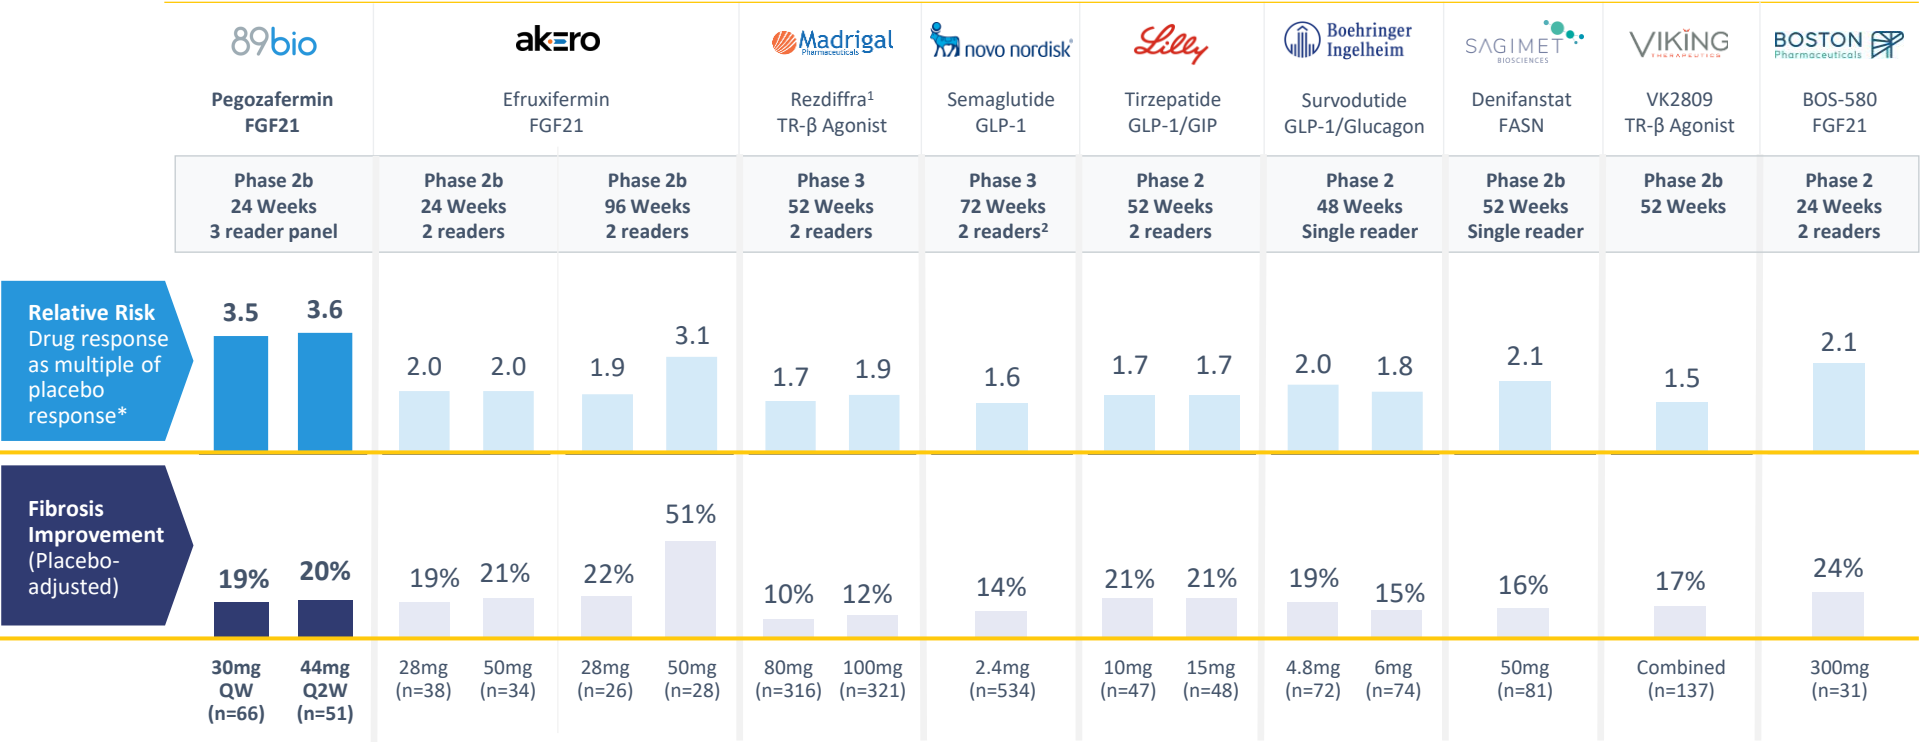
- In the placebo group, 7 of 37 (19%) of the F3 patients progressed
- In the pooled PGZ group, 6 of 69 (9%) of the F3 patients progressed

*Relative risk presented is calculated by dividing the drug response by placebo response. Relative risk calculated using statistical methods show similar results.
Source: Full Analysis Set (ITT); Multiple imputation analysis via Cochran-Mantel-Haenszel (CMH); test stratified by type 2 diabetes mellitus (T2DM) status (yes vs. no) and fibrosis stage (F2 vs. F3).

Comparative Clinical Data in Non-Cirrhotic Patients

≥1 Stage Fibrosis Improvement with No Worsening of MASH

In absence of H2H studies, drug response as a multiple of placebo offers robust window for cross-trial comparisons by controlling for variability amongst readers and consensus methods



*Relative risk, or drug response as multiple of placebo response, is calculated by dividing drug response by placebo response

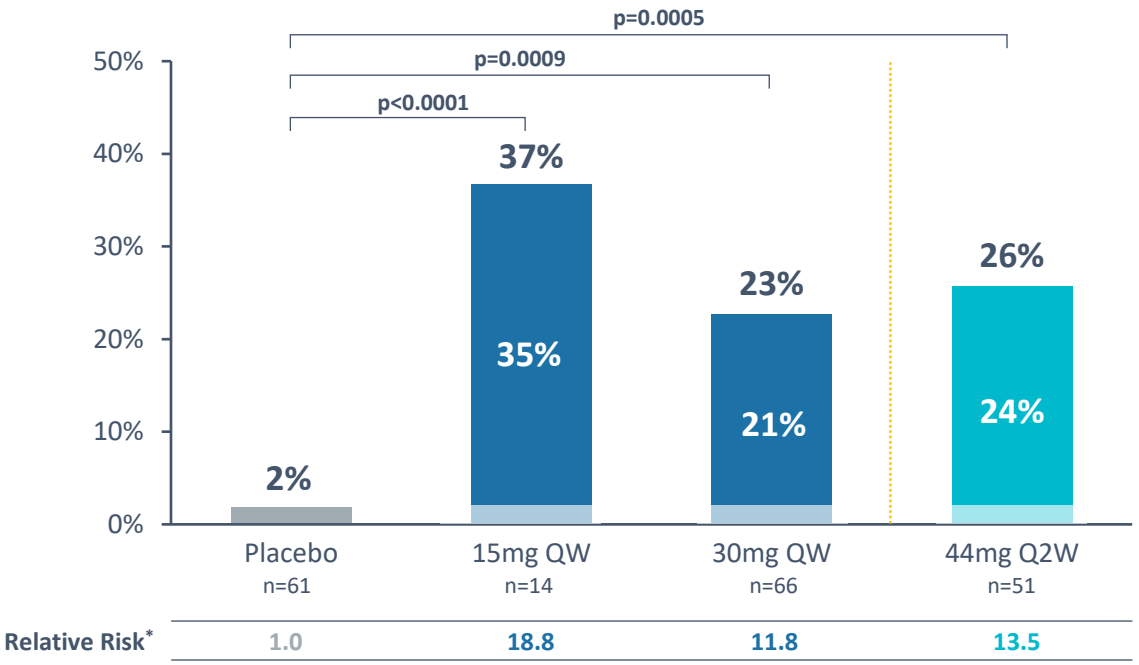
[1] ≥1 stage fibrosis improvement with no worsening of NAS. Fibrosis improvement by ≥ 1 stage with no worsening of NAFLD activity score.

[2] Each slide is read by two readers (a pair), who were randomly selected out of six centralized pathologies

Note: These data are derived from different clinical trials at different points in time, with differences in trial design and patient populations. As a result, cross-trial comparisons cannot be made, and no head-to-head clinical trials have been conducted.

Pegozafermin Demonstrated Statistical Significance on MASH Resolution at All Doses

WEEK 24



* Relative risk presented is calculated by dividing the drug response by placebo response. Relative risk calculated using statistical methods show similar results.
Source: Full Analysis Set; multiple imputation analysis via Cochran-Mantel-Haenszel (CMH) test stratified by T2DM status (yes vs. no) and fibrosis stage (F2 vs. F3).

Pegozafermin Demonstrated Statistical Significance on the Combined Endpoint of Fibrosis Improvement and MASH Resolution

WEEK 24

MRI-PDFF in patients with >10% liver fat at baseline (n=108 at week 24; n=92 at week 48)

89bio

Pegozafermin Offered Additive Benefits to GLP-1 Therapy in Patients with MASH through Week 48

GLP1

BACKGROUND

- 37 patients in ENLIVEN were on GLP-1 therapy at baseline – 25 received pegozafermin, 12 received placebo
- Patients on GLP-1 were on stable doses for a minimum of six months with most patients on semaglutide or dulaglutide; most of these patients were also on additional diabetes medications
- Patients had comparable baseline characteristics across groups and relative to full study population

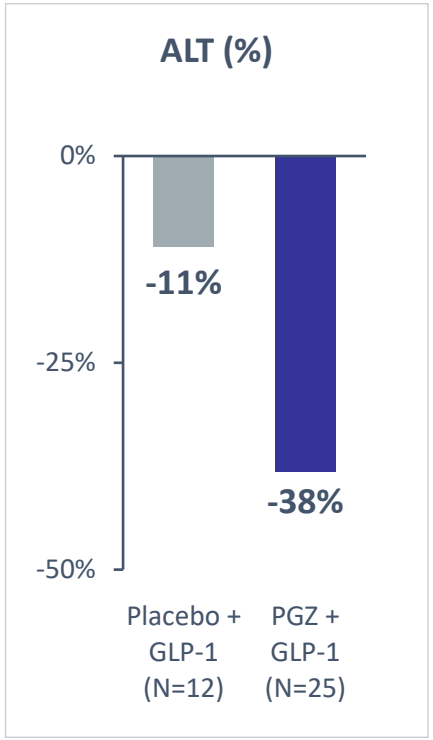
KEY RESULTS

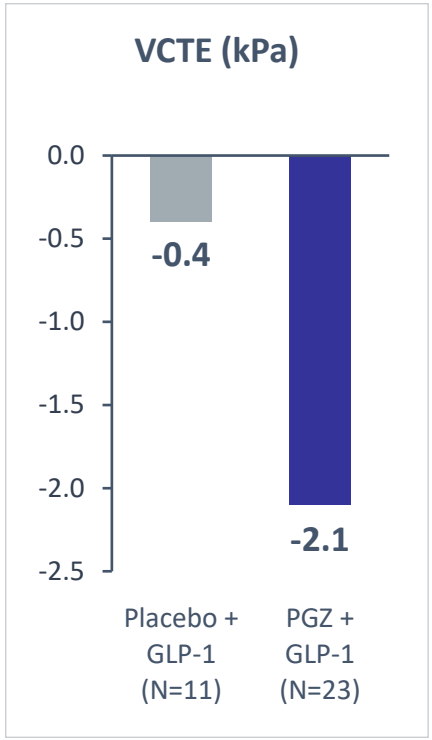
Pegozafermin on top of GLP-1 therapy showed the following versus GLP-1 plus placebo at week 24 and week 48:

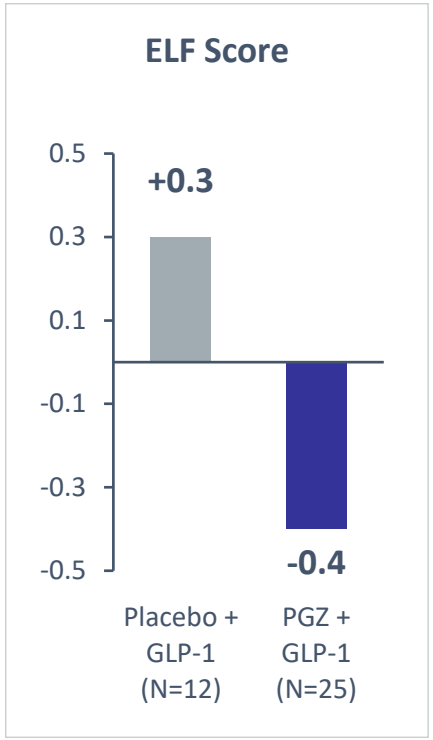
- Improved Fibrosis
- Reduced Liver Fat
- Improved Liver Health
- Acceptable Tolerability Profile

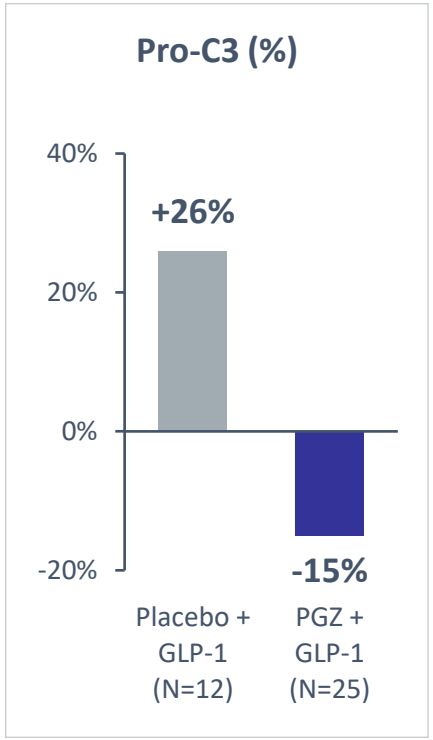
Greater Benefits on Fibrosis Markers Were Observed with Pegozafermin vs. Placebo in Patients on Background GLP-1 Therapy at Week 24

WEEK 24
GLP1





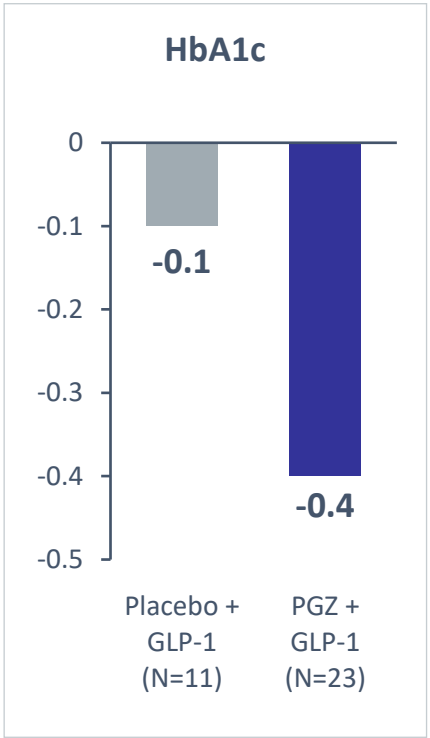


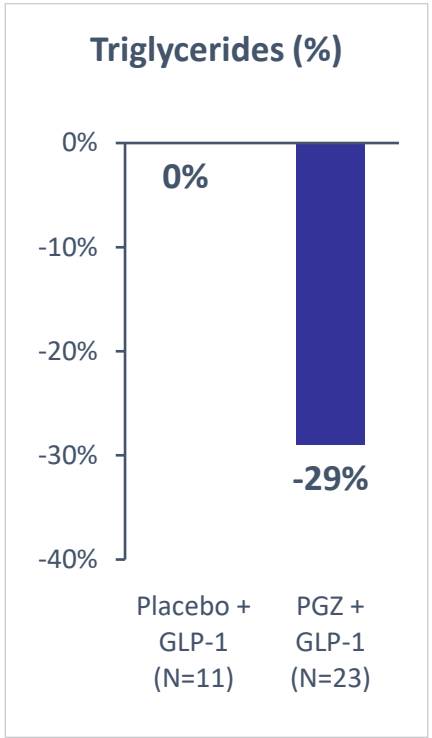


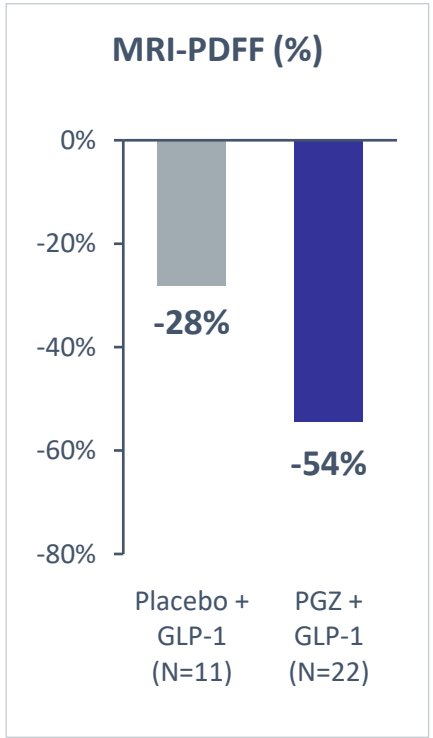
Source: Full Analysis Set. ELF, ALT and Pro-C3 reported as LS mean change from baseline; VCTE reported as median change (absolute) from baseline.
Post-hoc analysis

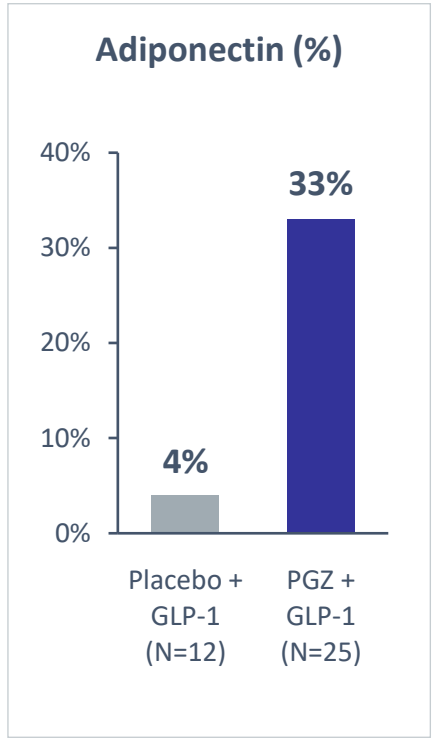
Greater Benefits on Metabolic Markers Were Observed with Pegozafermin vs. Placebo in Patients on Background GLP-1 Therapy at Week 24

WEEK 24
GLP1









Source: Full Analysis Set. Adiponectin reported as LS mean change from baseline; HbA1c reported as median change (absolute) from baseline; MRI-PDFF and TG reported as median percent change from baseline. Post-hoc analysis

Pegozafermin Offers a Promising Profile in Patients with Compensated MASH Cirrhosis (F4)

F4

BACKGROUND

- ENLIVEN enrolled 14 MASH stage F4 patients of which 12 patients* had follow-up biopsies at week 24
- Patients had baseline characteristics generally reflective of a well-compensated cirrhotic population

KEY RESULTS

- 45% of pegozafermin-treated patients had fibrosis improvement ≥1 stage without worsening of MASH
- Improvements in NITs of fibrosis, liver injury, and liver fat were observed through week 48
- Safety and tolerability profile in F4 was similar to the F2/F3 population

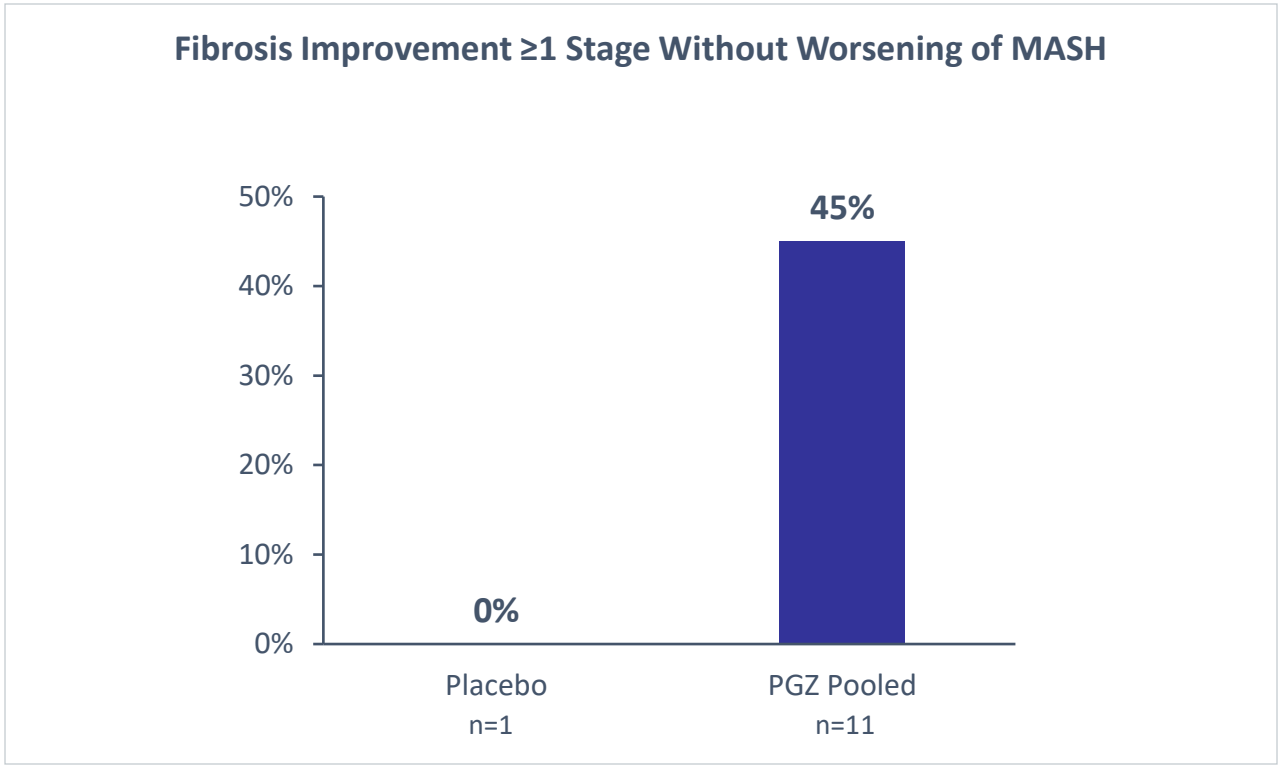
89bio

*N=1 on placebo and N=11 PGZ (all doses)

Pegozafermin Achieved Fibrosis Improvement Without Worsening of MASH in 45% of Patients with F4 Fibrosis at Baseline

WEEK 24

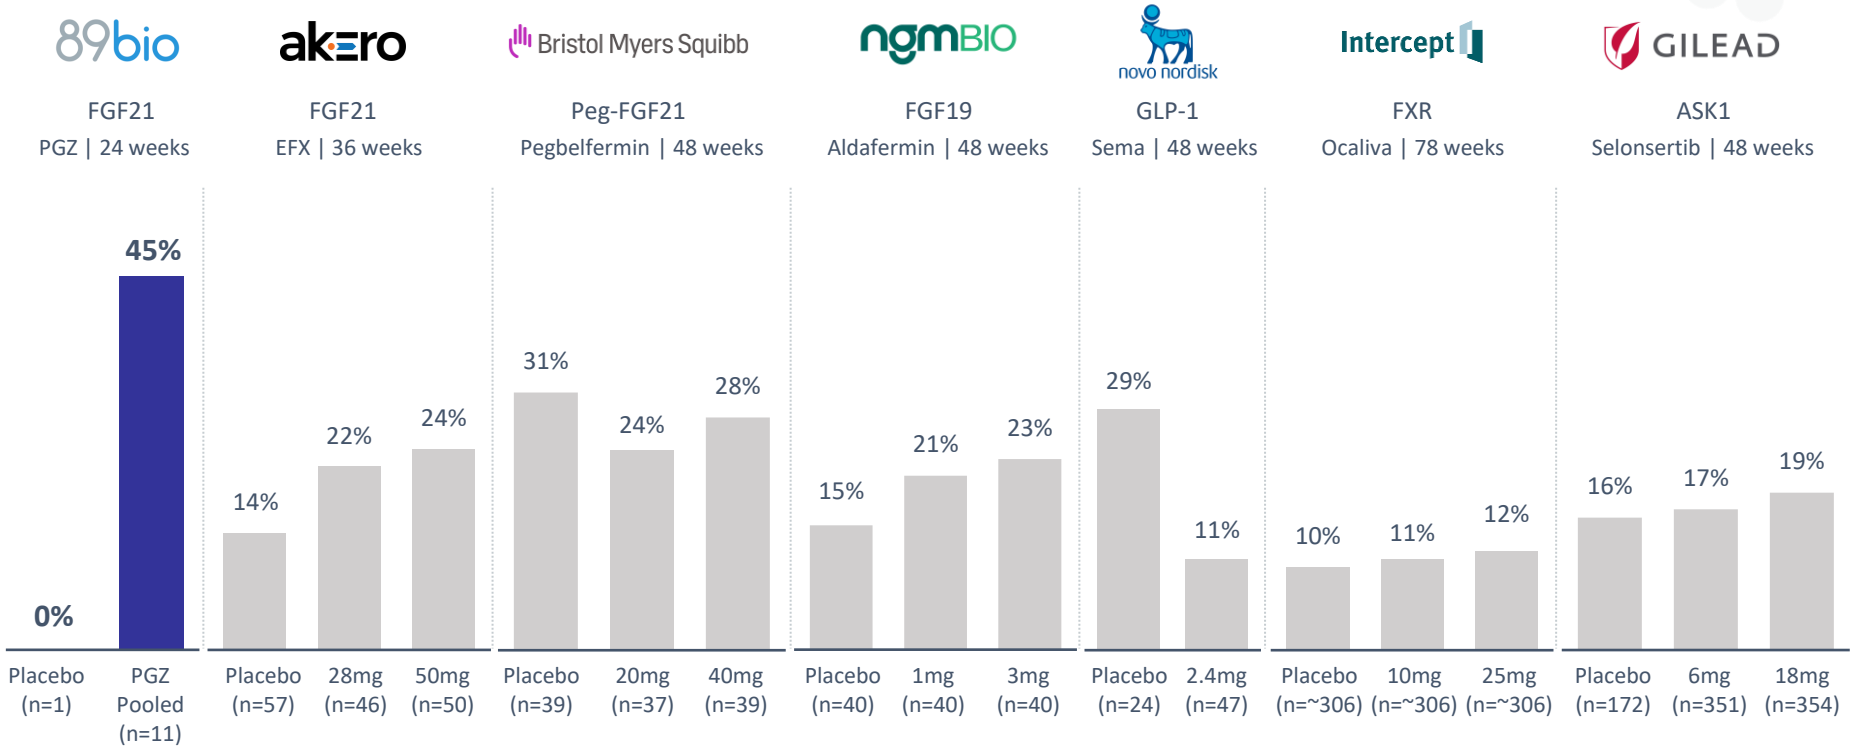
F4



- Pegozafermin treatment led to fibrosis improvement ≥1 stage in 9/11 treated patients (82%)
- Pegozafermin treatment led to fibrosis improvement with no worsening of ballooning and inflammation in 7/11 treated patients

12/14 cirrhotic patients enrolled in ENLIVEN had follow-up biopsies at week 24 (11 treated patients and 1 placebo patient).

Pegozafermin Has Demonstrated Preliminary Evidence of Fibrosis Regression in Patients with F4 Fibrosis*



* If approved

Note: These data are derived from different clinical trials at different points in time, with differences in trial design and patient populations. As a result, cross-trial comparisons cannot be made, and no head-to-head clinical trials have been conducted.

NIT Results over 48 Weeks in F4 Patients From ENLIVEN Demonstrated Consistent Benefit

WEEK 24
WEEK 48
F4

	PGZ-Treated Patients (n=12)	
Parameter	**24 weeks**	**48 weeks**
Liver Fibrosis and Inflammation		
ELF (units)	-0.3	-0.5
FAST	-46%	-42%
VCTE (kPa)	-2.7	-1.1
Pro-C3	-5%	-20%
FIB-4	-11%	-16%
Liver Injury		
ALT (%)	-53%	-58%
AST (%)	-31%	-38%

High correlation between NIT responders and fibrosis improvement

89bio

Data presented as LS means for ALT, AST, FAST, Pro-C3, FIB-4 and ELF and as medians for the other parameters; AASLD 2023

Pegozafermin Was Well Tolerated Across All Patients In ENLIVEN

Most TEAEs were Grade 1 and Grade 2

WEEK 48

Drug-related TEAEs in ≥10% of patients Through 48 Weeks

Preferred Term	Placebo (n=50)	15mg QW (n=21)	30mg QW (n=72)	44mg Q2W (n=57)
Diarrhea	3%	24%	17%	9%
Nausea	1%	14%	21%	18%
Injection site erythema	4%	14%	14%	5%
Injection site rash	2%	0	10%	4%
Increased appetite	2%	10%	13%	5%

- At week 48, no statistically significant or clinically meaningful changes were observed in blood pressure, bone biomarkers or DXA with PGZ 30 mg QW or 44 mg Q2W relative to placebo.

	Placebo	15mg QW	30mg QW	44mg Q2W
Drug-related AEs leading to discontinuation	0	5%[a]	6%[b]	4%[c]
Drug-related Serious Adverse Event (SAE)	0	0	0	2%[c]

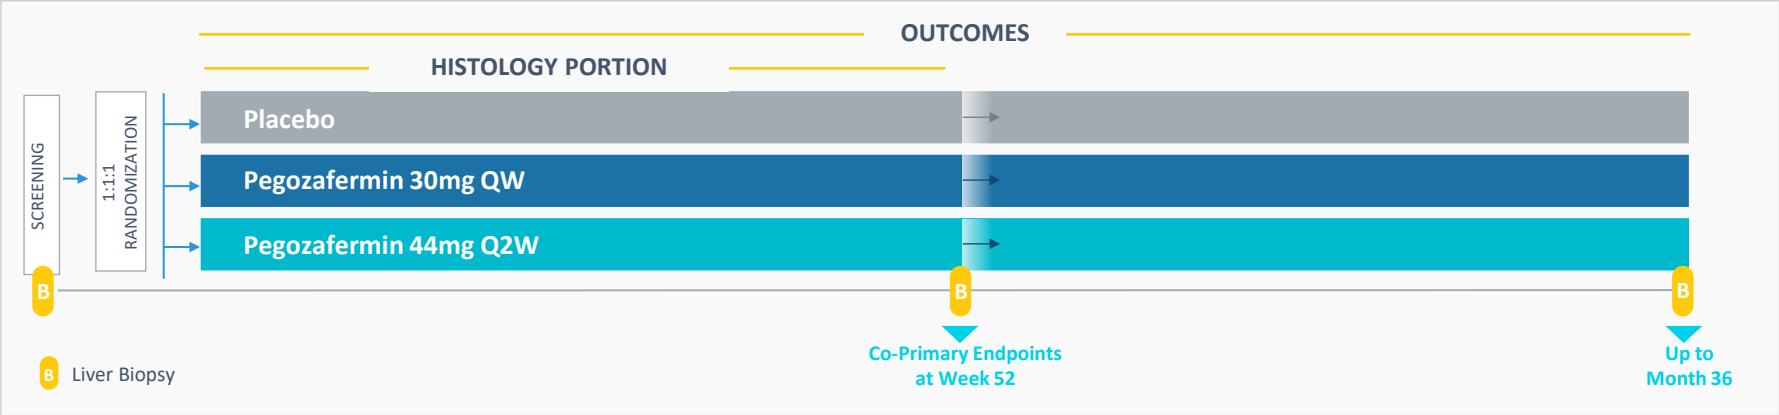
Related discontinuations: [a] Diarrhea [15 mg QW] ; [b] Diarrhea [30 mg QW]; Nausea [30 mg QW]; Diarrhea [30 mg QW]; ISR erythema [30 mg QW]; [c] Pancreatitis [44 mg Q2W]; Nausea [44 mg Q2W].

89bio

Detailed safety and tolerability presented in Loomba et al, NEJM 2023

Source: Safety Analysis Set. AE table cutoff ≥10% of patients for placebo, 30mg QW and 44mg Q2W doses. Bone biomarkers were CTX and P1NP.

ENLIGHTEN-Fibrosis: Phase 3 trial in Non-cirrhotic MASH (F2-F3) is Ongoing



ENlighten fibrosis

in Non-cirrhotic MASH patients

HISTOLOGY PORTION FOR ACCELERATED APPROVAL

- **Co-primary Endpoints**:
  - One-point improvement in fibrosis with no worsening of MASH
  - MASH resolution with no worsening of fibrosis
- **Duration:** 52 weeks
- **Patients:** Subset of the ~1,000 patients

OUTCOMES PORTION FOR FULL APPROVAL

- **Primary Endpoint:** Patients are expected to continue to be treated beyond the 52-week assessment through outcomes to support full approval in F2-F3 patients
  - Progression to cirrhosis expected to comprise most outcome events
- **Patients**: ~1,000 patients

ENLIGHTEN-Fibrosis: Potential for success on both histology and clinical outcomes for F2/F3 MASH

HISTOLOGY

- FGF21 analogs have demonstrated robust fibrosis regression at both week 24 and over longer time frames
- Pegozafermin demonstrated fibrosis improvement at week 24 and maintenance of NITs at week 48
  - Biopsy at month 12 in a Phase 3 trial may show even more robust effect
- Robust statistical design to determine a clinically meaningful delta

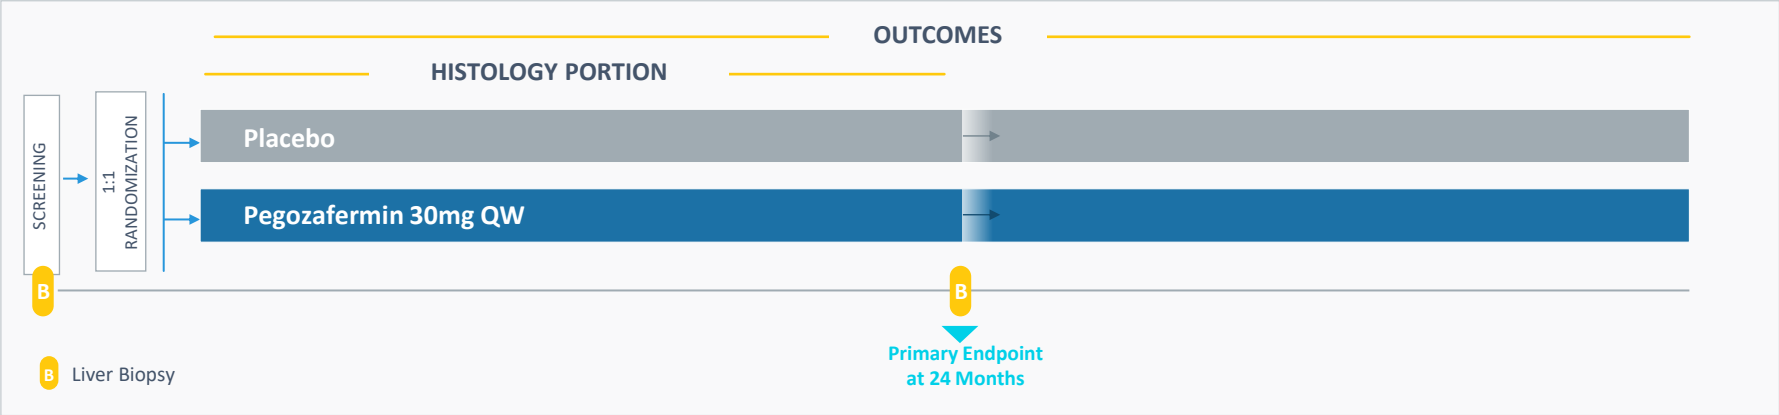
OUTCOMES

- Build on strong fibrosis regression and NIT data demonstrated from ENLIVEN
- Encouraging clinical outcomes data from Intercept's REGENERATE Phase 3 trial
  - Despite modest, ~10% fibrosis delta, Ocaliva® had a trend (p=0.04) to clinical outcome benefit*
- ~20% fibrosis delta for PGZ at week 24, bodes well especially given the potential for improved response with longer treatment
- Phase 3 is well-powered for outcomes; REGENERATE validated that progression to cirrhosis is the primary outcomes event

89bio

* These data are derived from different clinical trials at different points in time, with differences in trial design and patient populations. As a result, readthroughs to our ongoing trial cannot be assured based on comparison to different trials.

ENLIGHTEN-Cirrhosis: First FGF21 Analog to Enter Phase 3 Study in Compensated Cirrhosis (F4)



ENlighten cirrhosis

in Compensated Cirrhotic (F4) MASH patients

HISTOLOGY PORTION FOR ACCELERATED APPROVAL

- **Primary Endpoint:** Regression of fibrosis from F4 to an earlier stage of fibrosis
- **Duration:** 24 months
- **Patients:** Subset of the 760 patients

OUTCOMES PORTION FOR FULL APPROVAL

- **Primary Endpoint:** Clinical outcomes composite to support full approval in the U.S. and in Europe, across F2-F4 patients
  - Modifications to some outcome definitions to allow trial to reach final number of events quicker, and therefore potentially accelerate timeline to readout
- **Patients:** Approximately 760 patients*

89bio * potential for re-estimation of sample size

ENLIGHTEN-Cirrhosis: Potential for Success on Histology and Outcomes

HISTOLOGY

- FGF21 analogs have demonstrated greatest degree of benefit in fibrosis regression
- Consistent response in fibrosis & NITs across F3 and F4 to support potential for robust fibrosis benefit
- Enroll/select patients with early F4 disease more likely to show fibrosis regression
- Follow-up biopsy at 24 months
  - Expected to be sufficient time to allow PGZ to work
  - Could reduce placebo biopsy noise
- Robust statistical design to determine a clinically meaningful delta

OUTCOMES

- Build on strong fibrosis regression and NIT data from ENLIVEN
- Enroll/select additional patients with the right profile to increase event rates
- Modified outcome definitions to increase event rate
- Rigorous endpoint assessment
- Robust statistical design to determine a clinically meaningful delta

Potential to Address Substantial Needs in MASH with Advanced Fibrosis and Cirrhosis

Large patient population with significant health risks

- The market for F2-F3 and F4 MASH is estimated to impact ~15M patients by 2035 in the US with equivalent number in the EU
  - The prevalence of F2-F3 MASH and compensated cirrhotic MASH (F4) may potentially reach ~10.7M and ~3.6M respectively in 2035, net of impacts from GLP-1-based therapies[1]
  - While the wide adoption of GLP-1 based therapies may reduce MASH prevalence, the eligible pool of diagnosed patients may increase due to new MASH-specific therapies

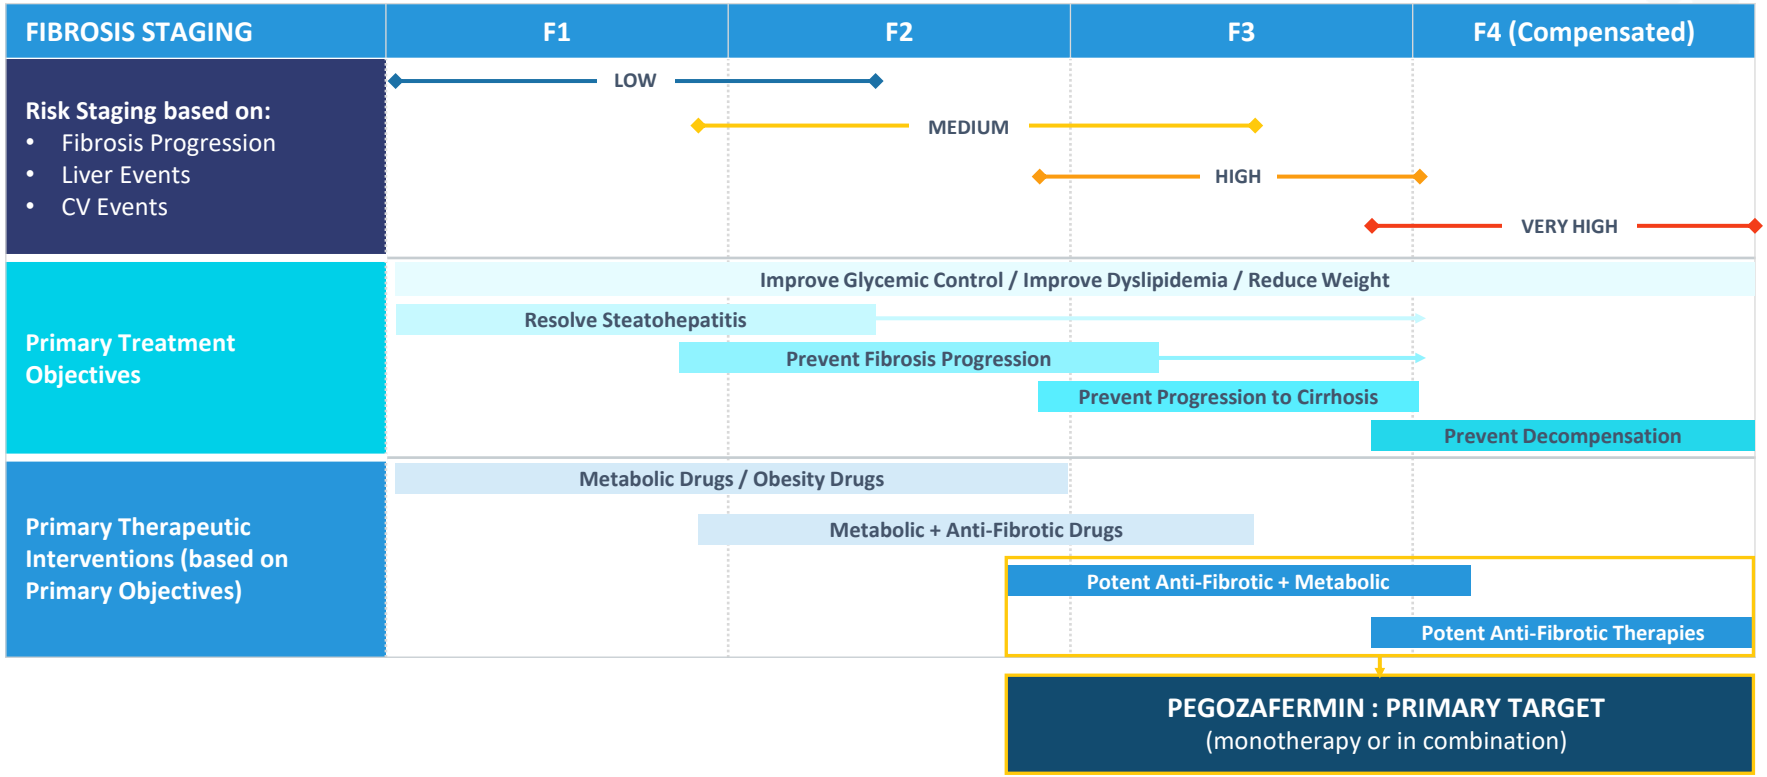
Significant market opportunity for pegozafermin

- We believe we are uniquely positioned to meet the needs of MASH patients with advanced fibrosis (primarily F3) and compensated cirrhosis (F4)
  - Potent anti-fibrotic drugs such as pegozafermin is expected to be the preferred option to treat advanced MASH versus metabolic therapies that reduce fat and indirectly improve liver health over time
  - Clinical data show additive benefits to GLP-1 based therapies, and we believe support combination use
- Large market is likely to support therapies with different mechanisms of action (MOA) and multiple therapies within a specific mechanism (similar to T2DM or LDL therapeutic area) – no MOA is currently a “cure” for MASH

89bio

1. Source: Estimates and projections are derived from Estes, et al. Hepatology 2018. and adjusted from the for potential GLP-1 impacts based on company analysis and market research.

Pegozafermin Positioned to Address Advanced MASH



Advanced MASH (F2/F3) Represents a Significant Market

F2/F3

Prevalence: With and Without Incretin Effect

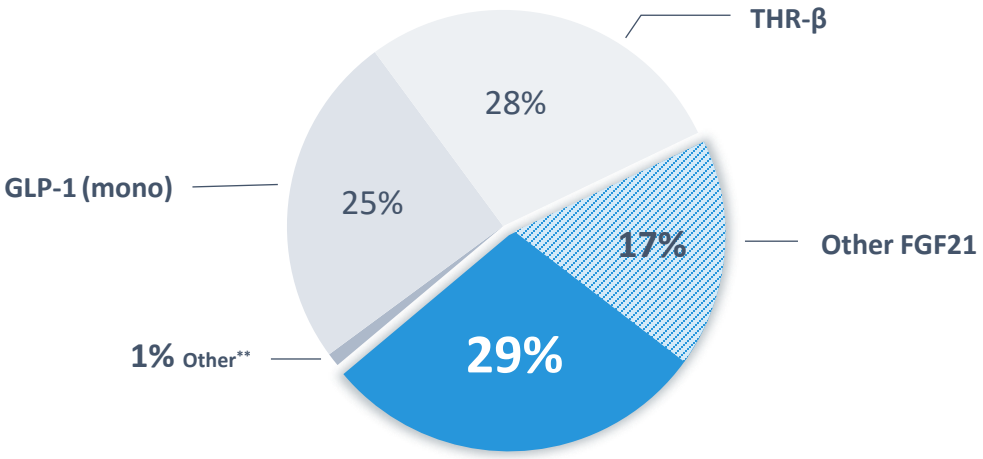
Pegozafermin Expected to Garner Significant Market Share
In F3 Patients

F3

EXPECTED PRESCRIBING AMONGST HEP/GI PHYSICIANS

(% treated MASH patients)



Total PGZ
(**15%** mono + **14%** combo with GLP-1)

FGF21s garner ~45% market share, with ~2/3rd gained by PGZ

- PGZ benefit/risk profile and fewer injections make it preferred FGF21
- ~50% of usage in combination with GLP-1

Total GLP-1 usage (combo + mono): ~65%

**Includes no pharmacologic treatment, clinical trials and existing non-approved agents like vitamin E or pioglitazone
^F4 shares only tested change if pegozafermin had FDA approval in F4 patients and assumes uptake in "other FGF21" due to benefit of being in the same class; research did not show profiles or assume approvals for other agents. Source: Primary research with 35 Hep/GIs , September 2023.

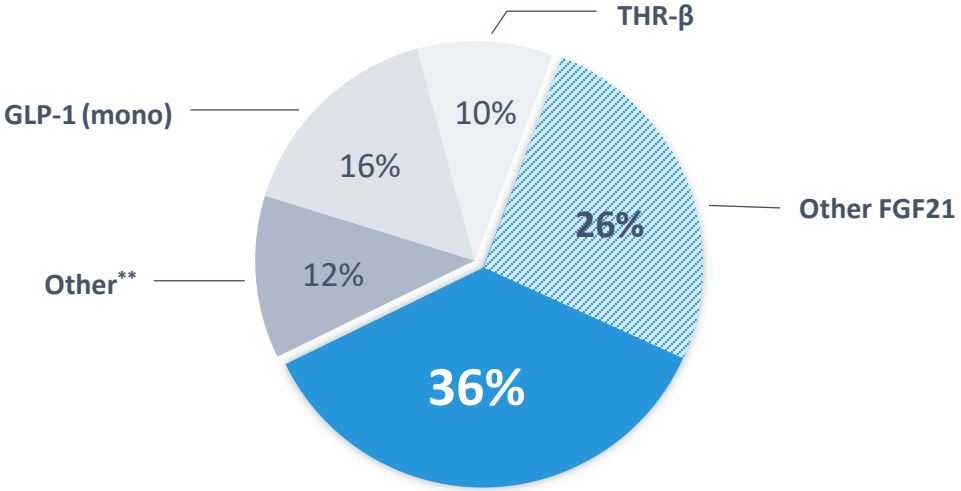
Pegozafermin Expected to Garner Significant Market Share

In Compensated F4 Patients

Compensated F4^

EXPECTED PRESCRIBING AMONGST HEP/GI PHYSICIANS

(% treated MASH patients)



Total PGZ

(**24%** mono + **12%** combo with GLP-1)

FGF21s garner ~60% market share, with ~60% gained by PGZ

- PGZ benefit/risk profile and fewer injections make it preferred FGF21
- 1/3rd of usage in combination with GLP-1

Total GLP-1 usage (combo + mono): ~45%

**Includes no pharmacologic treatment, clinical trials and existing non-approved agents like vitamin E or pioglitazone

^F4 shares only tested change if pegozafermin had FDA approval in F4 patients and assumes uptake in "other FGF21" due to benefit of being in the same class; research did not show profiles or assume approvals for other agents. Source: Primary research with 35 Hep/GIs , September 2023.

89bio

Opportunity in Severe Hypertriglyceridemia (SHTG)

Pegozafermin Could Offer an Important New Treatment Option for SHTG

Topline results expected in 2H 2025

Large growing patient population with significant health risks; overlap with MASH patient population

- Increasing TG levels increase risk of acute pancreatitis, cardiovascular disease and all-cause mortality
- Emerging evidence of the cardiovascular (CV) benefit associated with TG reduction in patients with CV risk factors

Significant market opportunity for agent with broad metabolic benefits

- Pegozafermin has a unique selling proposition that is meaningful to prescribers – more effective triglyceride reduction with improvements in liver fat and other metabolic measures
- Analyst consensus peak year sales estimated to be ~$1 billion (US only)

Clinical program substantially de-risked

- Phase 3 ENTRUST trial enrollment complete with topline 26-week data expected in 2H 2025

SHTG program is synergistic with the MASH program

- Development: Leverages safety database across the two programs to minimize spend across total program
- Commercial: Leverage sales force and infrastructure costs

ENtrigue – Phase 2 SHTG Trial Design

KEY INCLUSION CRITERIA

- TG ≥500mg/dL and ≤2,000mg/dL
- Background therapy: statins and/or prescription fish oil and/or fibrates OR none

PRIMARY ENDPOINT

- Primary endpoint: % Change in TGs from baseline

KEY SECONDARY ENDPOINTS

- Lipids: non-HDL-C, HDL-C, Apo-B
- Liver fat (MRI-PDFF)
- Glycemic control

Magnetic Resonance Imaging – Proton Density Fat Fraction
QW, once-weekly; Q2W, once every two weeks.
Safety analysis set, n=85 (patients who received at least 1 dose)
Full analysis set, n=82 (patients with at least 1 post-baseline TG assessment)
MRI analysis set n=23 (patients with baseline and end of treatment MRIs)

Pegozafermin Significantly Reduced Triglycerides Across All Dose Groups

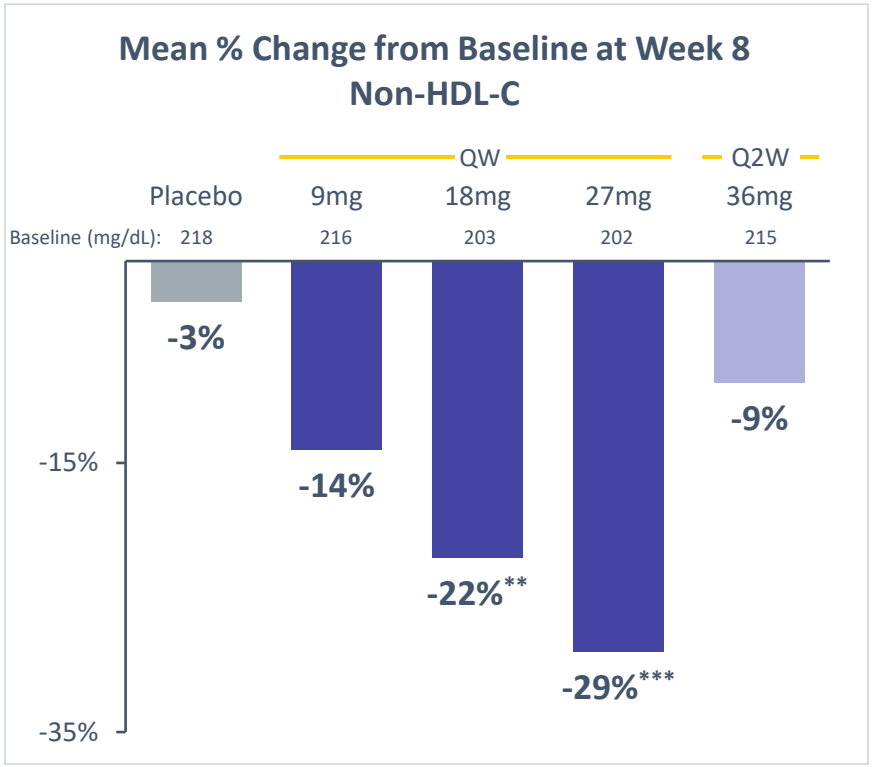
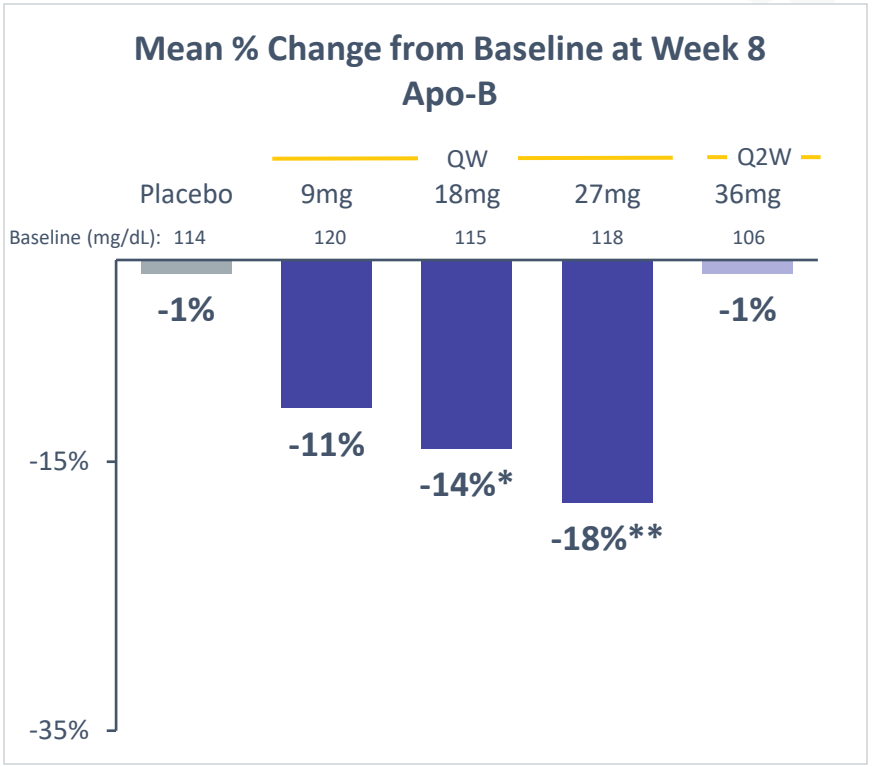
Pegozafermin Demonstrated Clinically Meaningful Improvements in Key Marker of CV Risk for SHTG

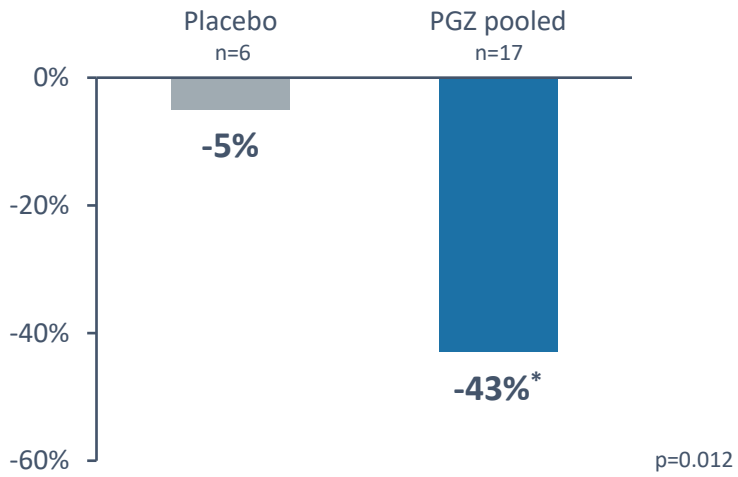




89bio Full Analysis Set; * p<0.05; ** p<0.01; *** p<0.001 vs. placebo based on MMRM analysis

Pegozafermin Demonstrated Significant Improvement on Key Co-morbidities for SHTG Patients

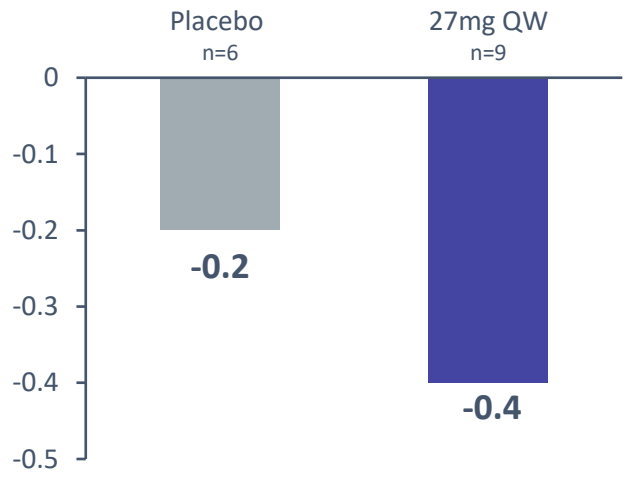
Mean Relative Reduction in Liver Fat vs Baseline at Week 8



HIGH RESPONDER RATES

≥30% Reduction in liver fat: 88% *vs 0% in placebo*

Absolute Change in HbA1c at Week 8 Patients with Baseline HbA1c ≥6.5%



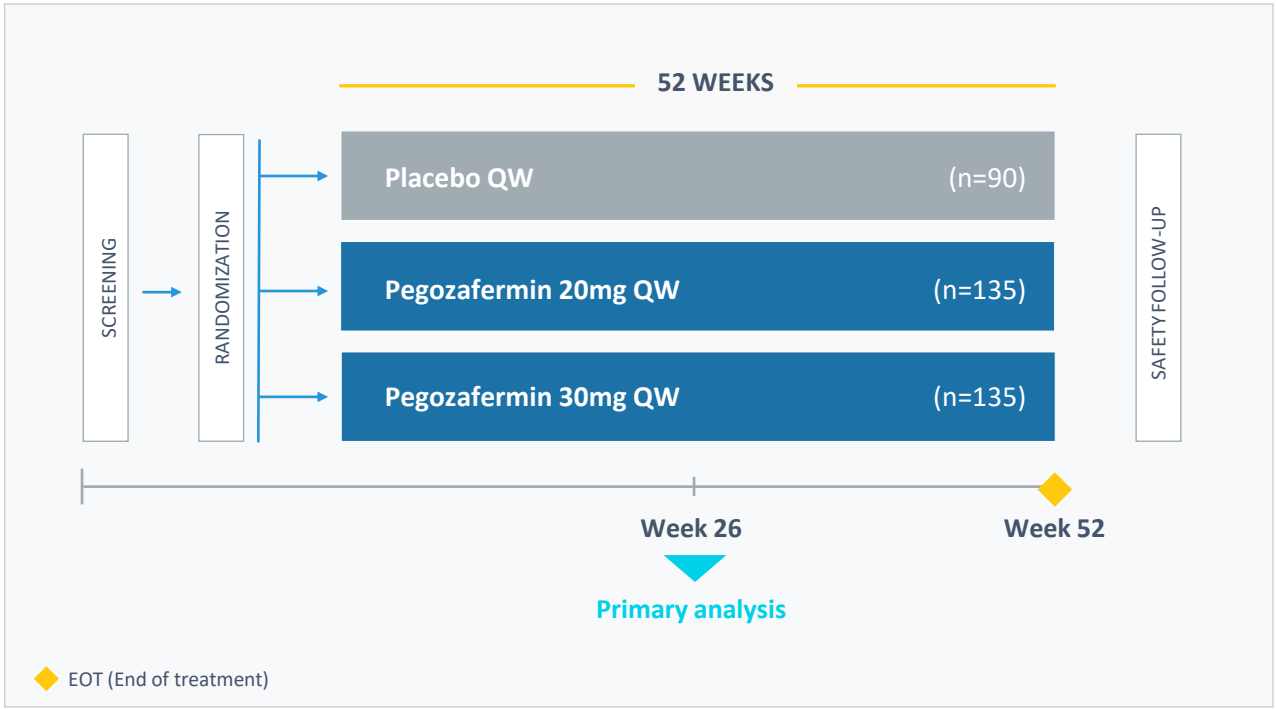
HbA1c: Mean Baseline 27 mg QW: 7.48%; Week 8: 7.08%

Post-hoc analysis of patients with follow-up MRI-PDFF ≤21 days from date of last dose in 27mg QW cohort demonstrated a 63% mean relative reduction from baseline
*p <0.05 vs. placebo
MRI Analysis Set; p value vs placebo based on ANCOVA analysis

Pegozafermin Demonstrated Favorable Safety/Tolerability Profile in Phase 2 Study

- Pooled pegozafermin treatment related Adverse Events (AEs) observed in ≥7.5% of patients were:
  - Nausea (10%), diarrhea (9%) and injection site reaction (9%) vs placebo (0%)
  - All Gastrointestinal (GI) AEs were Grade 1 or 2
- No Grade 3 or higher AEs
- No treatment-related SAEs; 2 treatment-related discontinuations at 27mg QW (both Grade 2)
- No tremor or hypersensitivity AEs reported
- No adverse effects on blood pressure or heart rate

Phase 3 ENTRUST Trial Design



KEY INCLUSION CRITERIA

- TG ≥500mg/dL and ≤2,000mg/dL
- Stable background lipid modifying therapy*

PRIMARY ENDPOINT

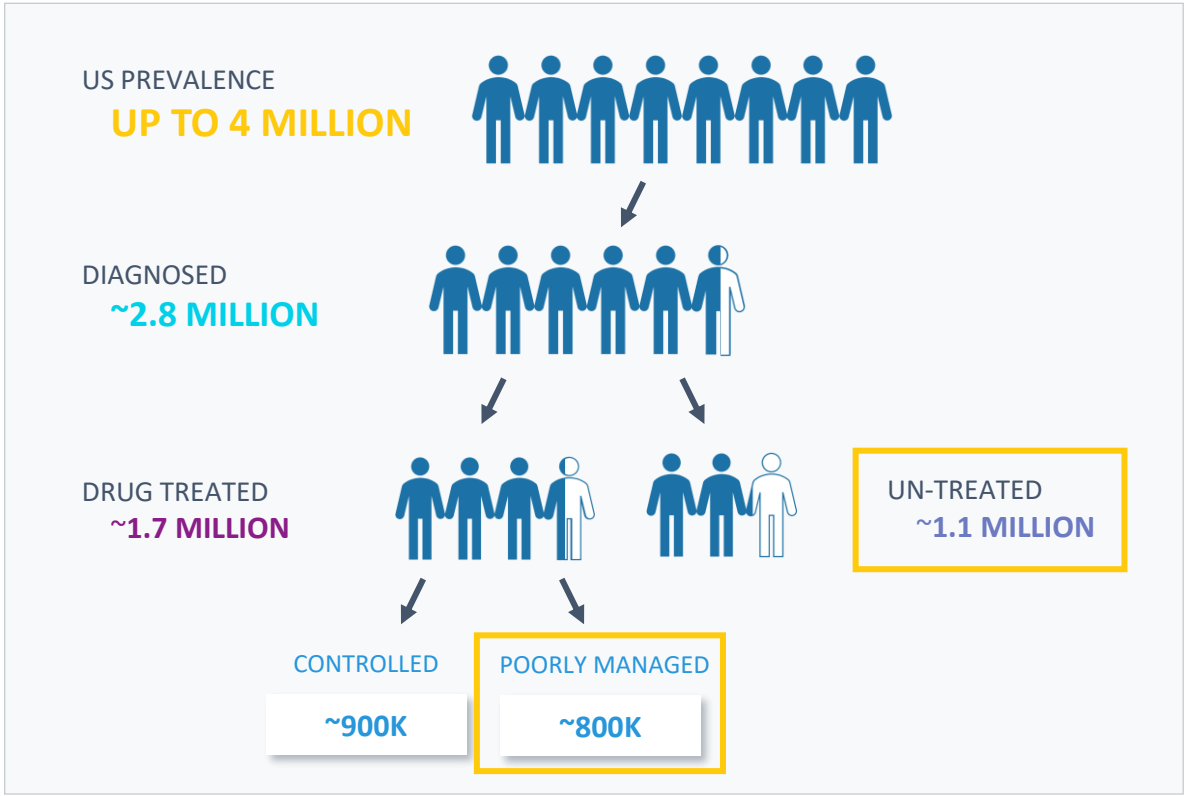
- Percent change from baseline in fasting TGs at Week 26 vs. placebo

KEY SECONDARY ENDPOINTS

- Liver fat by MRI-PDFF, Various lipids, HbA1c at Week 26 vs. placebo, TGs at Week 52 vs. placebo

89bio *Not all patients may be on background lipid modifying therapy

SHTG Represents a Large Population with High Unmet Need



Co-morbidity	Prevalence in SHTG population
Fatty Liver Disease (NAFLD)	Up to 100%
Type 2 diabetes/Prediabetes	Up to 70%
Dyslipidemia	Up to 65%

Pegozafermin profile is unique and compelling to physicians because of potential for metabolic benefits

Pegozafermin Delivers on Key Attributes for Successful SHTG Therapy

MINOR INFLUENCE — MODEST INFLUENCE — MAJOR INFLUENCE

Hierarchy of Attributes for SHTG Therapy

RoA/Dosing

- RoA and dosing were seen as the least influential

Clinical Outcomes

- Physicians noted that clinical outcomes are not required to drive utilization in SHTG

Safety/Tolerability

- Lesser impact on treatment decisions compared to efficacy

Metabolic Endpoints

- Viewed as additive benefits
- Liver fat, HbA1c, and weight loss most important

TG Endpoints

- Most influential endpoint to drive use
- Significant efficacy over SoC will drive utilization

PEGOZAFERMIN ATTRIBUTES

- Generally well-tolerated
- 43% mean relative reduction in liver fat[1]
- 0.4% absolute reduction in HbA1c[2]
- 63% reduction in TG from baseline[2]
- 80% of patients achieved TG<500mg/dL[1]

Physician Enthusiasm for Metabolic Endpoints

Liver fat reduction

Decrease in HbA1c

Pegozafermin has Similar TG Effects and Added Metabolic Benefits with No Increase in LDL-C when Compared to APO-C3 Inhibitor

	Pegozafermin ENTRIGUE[1]	Plozasiran (ARO-APO-C3) SHASTA-2[2]
Endpoint	**27mg QW placebo-adjusted**	**50mg Q12W placebo-adjusted**
TG	-53%	-57%
% Patients with TG<500	46%	37%
Liver fat by MRI-PDFF[3]	-32%	Not reported
HDL-C	+35%	+58%
Non-HDL-C	-29%	-20%
LDL-C	+1%	+59%
Apo-B	-17%	-6%
Glycemic control	Demonstrated beneficial effect on glycemic control	Worsening glycemic control reported as AE: 19% vs 12% placebo

[1]Bhatt, Bays, Miller et al. ENTRIGUE. Nature Medicine, 2023.
[2]AHA 2023: Gaudet, D; ARO-APOC3, an Investigational RNAi Therapeutic, Silences APOC3 and Reduces TG to Near Normal Levels in Patients with SHTG: SHASTA-2 Study Results
[3]ENTRIGUE topline data presentation, June 2022.
Note: These data are derived from different clinical trials at different points in time, with differences in trial design and patient populations. As a result, cross-trial comparisons cannot be made, and no head-to-head clinical trials have been conducted.

Corporate Highlights

Potential best-in-class FGF21 in three Phase 3 trials, each of which represents a significant market opportunity*

Targeting metabolic dysfunction-associated steatohepatitis (MASH) with advanced fibrosis

- Robust fibrosis data with favorable tolerability and dosing convenience
- Positive long-term data; additive benefits in patients on background GLP-1 therapy
- Phase 3 trials for F2-F3 and F4 ongoing, pursuing accelerated approval using histology

Synergistic severe hypertriglyceridemia (SHTG) program

- Substantially de-risked Phase 3 trial with topline data anticipated in 2H 2025

Commercial liquid product presentation and commercial-scale manufacturing available

Strong balance sheet with ~$440 million in cash as of Dec. 31, 2024[1]

Highly experienced leadership team with track record of execution, well-positioned for Phase 3 trials and commercialization*

* If approved

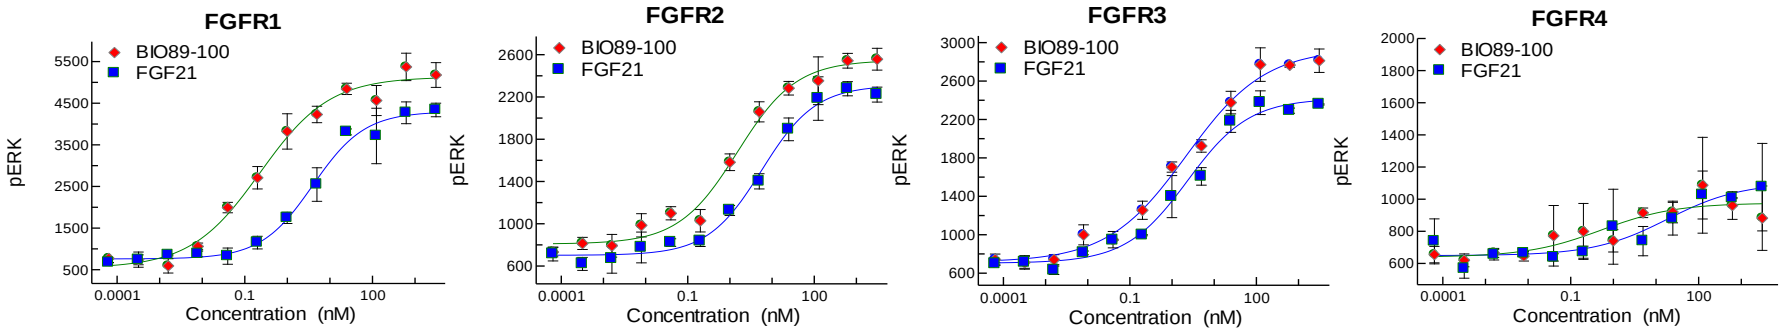
Pegozafermin Exhibits Highly Potent FGF Receptor Agonism



Pegozafermin has the potential to reproduce the beneficial metabolic effects of native FGF21

RECEPTOR	FGF21	Pegozafermin
	EC_{50} (nM)	EC_{50} (nM)
	Mean ± S.D.	Mean ± S.D.
KLB	nd	nd
KLB/FGFR1	4.5 ± 1.0	0.3 ± 0.07
KLB/FGFR2	4.5 ± 0.9	1.1 ± 0.4
KLB/FGFR3	1.8 ± 0.3	1.2 ± 0.4
KLB/FGFR4	nd	nd

nd – not determined; rhFGF19 EC_{50} at FGFR4 = 1.7 ± 0.4

* Receptor agonism measured in L6 cells expressing β-klotho and either FGF Receptor 1c, 2c, 3c, or 4 via pERK functional assay
** Figures represent data from a single experiment; Table represents mean data from multiple experiments

ENLIVEN Baseline Characteristics Well Balanced Across Dose Groups

Parameter Mean or %	Placebo (n=71)	15mg QW (n=21)	30mg QW (n=73)	44mg Q2W (n=57)	Total (n=222)
Age (years)	56	55	55	55	**56**
Female	55%	43%	69%	65%	**61%**
BMI (kg/m^2)	38	38	35	36	**37**
Type 2 Diabetes	69%	86%	62%	61%	**66%**
Fibrosis Stage (% F3)	66%	43%	64%	53%	**60%**
NAFLD Activity Score	5.0	4.8	5.3	5.2	**5.1**
Liver Fat Content (MRI-PDFF)	16.7%	15.8%	16.7%	15.8%	**16.4%**
Liver Stiffness (VCTE, kPa)	14.1	11.2	12.5	13.2	**13.0**
PRO-C3 (ng/mL)	50	62	54	52	**53**
ALT (U/L)	50	61	60	56	**56**

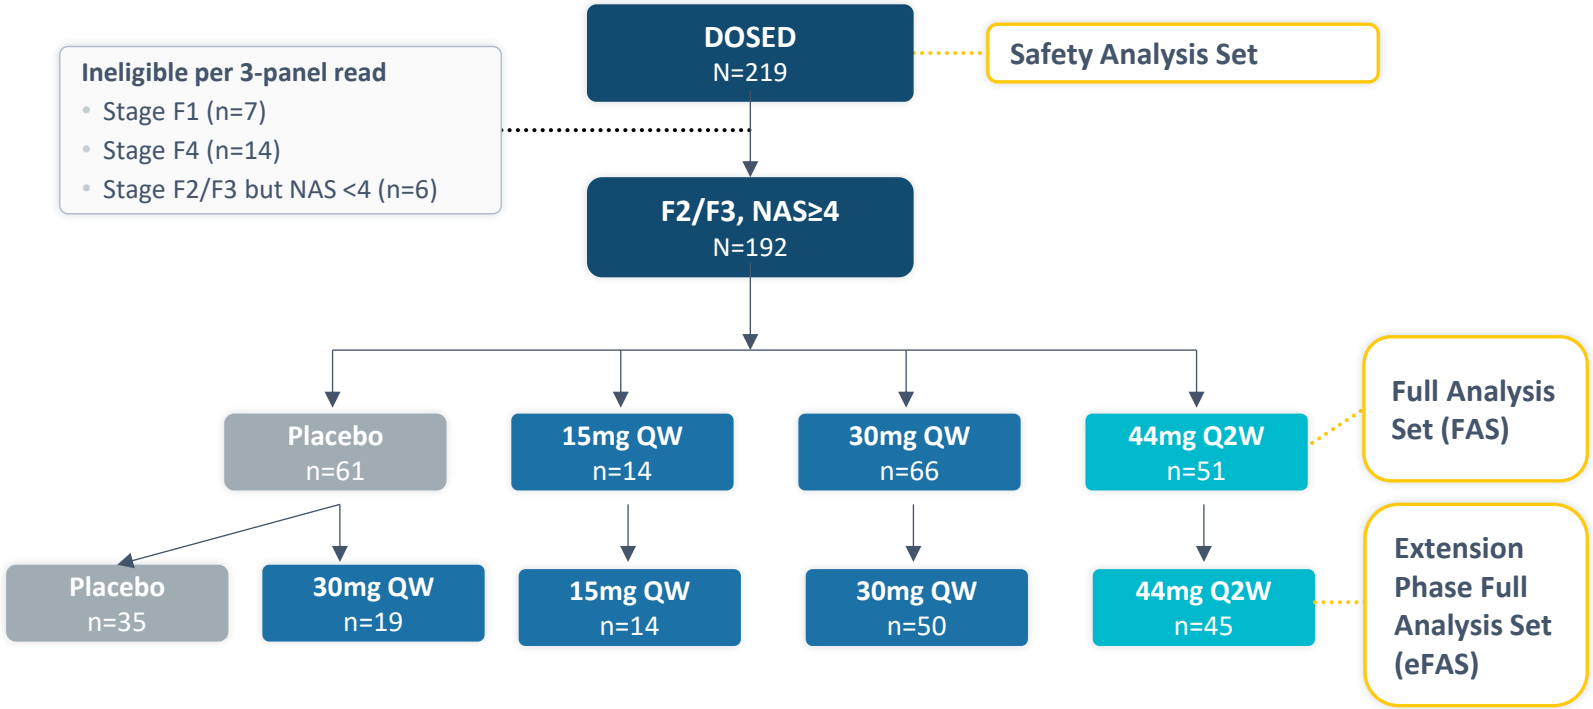
HbA1c, overall population (%)	6.6	7.0	6.6	6.7	**6.7**
Triglycerides (mg/dL)	170	186	175	165	**172**

Baseline characteristics were consistent in full analysis set (n=192) and the safety set (n=222)

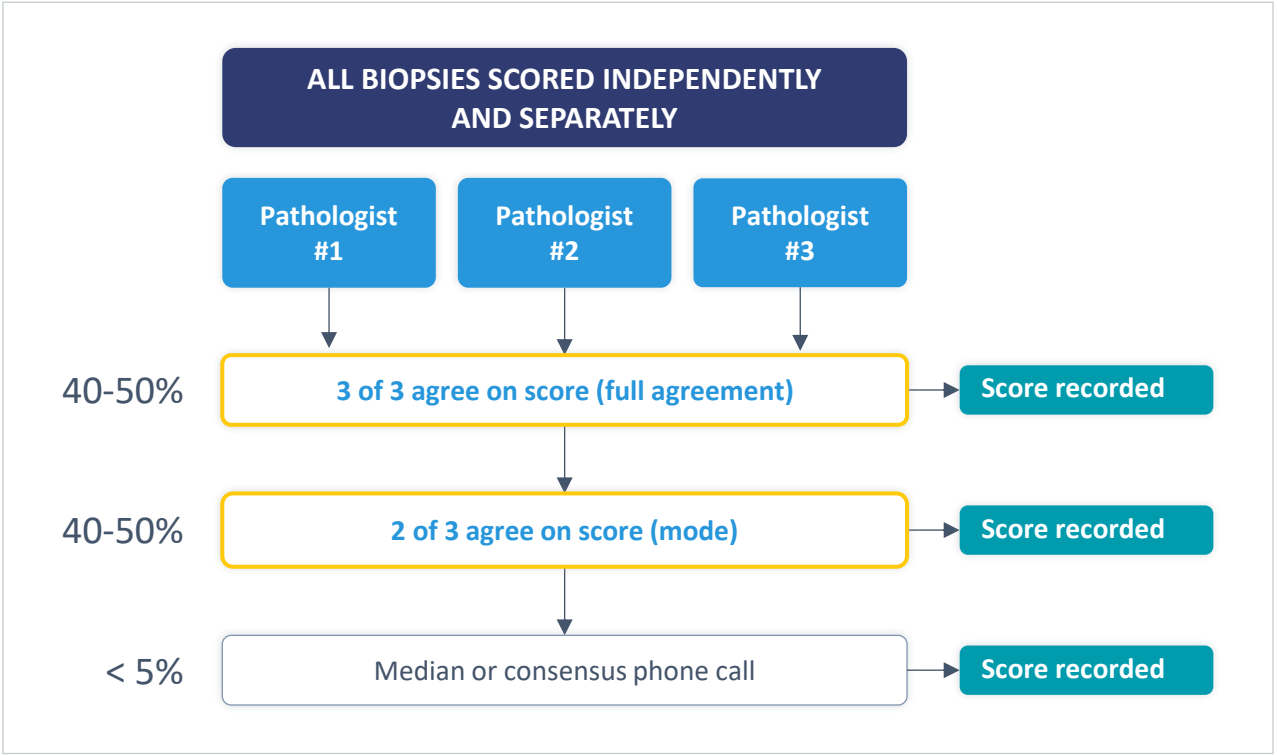
Source: Randomized Analysis Set.
ALT, alanine aminotransferase; AST, aspartate aminotransferase; NAFLD, nonalcoholic fatty liver disease; PRO-C3, N-terminal type III collagen propeptide; VCTE, Vibration-controlled transient elastography.

ENLIVEN Patient Disposition and Analysis Sets



Analysis Sets were prospectively defined
MRI-PDFF Analysis Set = all patients in FAS with baseline and at least one post-baseline MRI-PDFF assessment (n=181).

ENLIVEN Used Objective Biopsy Reading Methodology Designed to Reduce Histology Scoring Biases and Variability



- Pathologists underwent protocol-specific harmonization training before and during trial
- Pathologists were blinded to patient, treatment and sequence
- >99% of final scores determined by a priori established algorithm, versus resolving disagreements via inter-reader discussion

Sensitivity Analysis Treating Missing Histology Data as Non-Responder Confirms Robustness of Primary Efficacy Results

Fibrosis Improvement and MASH Resolution
Missing Data = Non-Responder
n=192, Week 24

	30mg QW	44mg Q2W
Fibrosis improvement without worsening of MASH		
Effect Size (placebo-adjusted)	15%	16%
p-value	0.019	0.015
MASH resolution without worsening of fibrosis		
Effect Size (placebo-adjusted)	17%	20%
p-value	0.0019	0.0009

89bio

Note: All data regarding third-party molecules on this slide are based on third-party studies and not our own. Conclusions on this slide are not based on head-to-head results

Data from Cohort 7 Support Pegozafermin's Impact in F4 Patients

Histology data - Fibrosis improvement ≥ 1 stage without worsening of MASH ranged from 17% to 57%

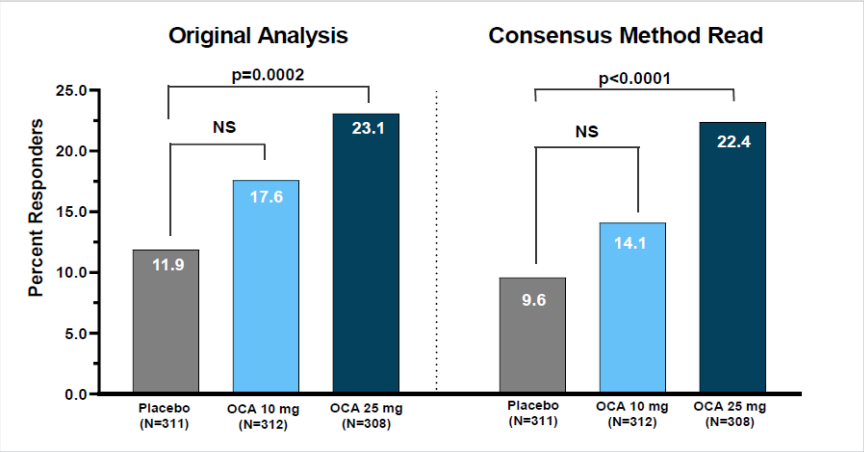
Parameter	PGZ Treated Patients (n=6)
Liver Fibrosis	
VCTE (kPa)	-3.8
FAST (%)	-78.5%
Pro-C3 (%)	-25.5%
Liver Injury	
ALT (%)	-50.7%
AST (%)	-48.7%

Data presented as means for Cohort 7 F4 patients

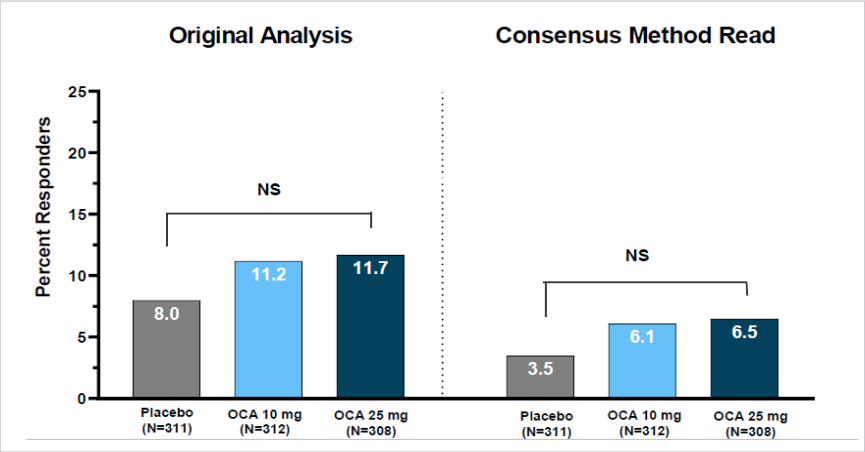
Safety and tolerability were similar to what has been observed in the non-cirrhotic patient population

Learnings from the Obeticholic Acid MASH Phase 3 Program: Comparison of Single Central Reader vs. 3-Panel Consensus

Improvement of Fibrosis by ≥ 1 Stage without Worsening MASH



Resolution of MASH with No Worsening of Liver Fibrosis



OBSERVATIONS:

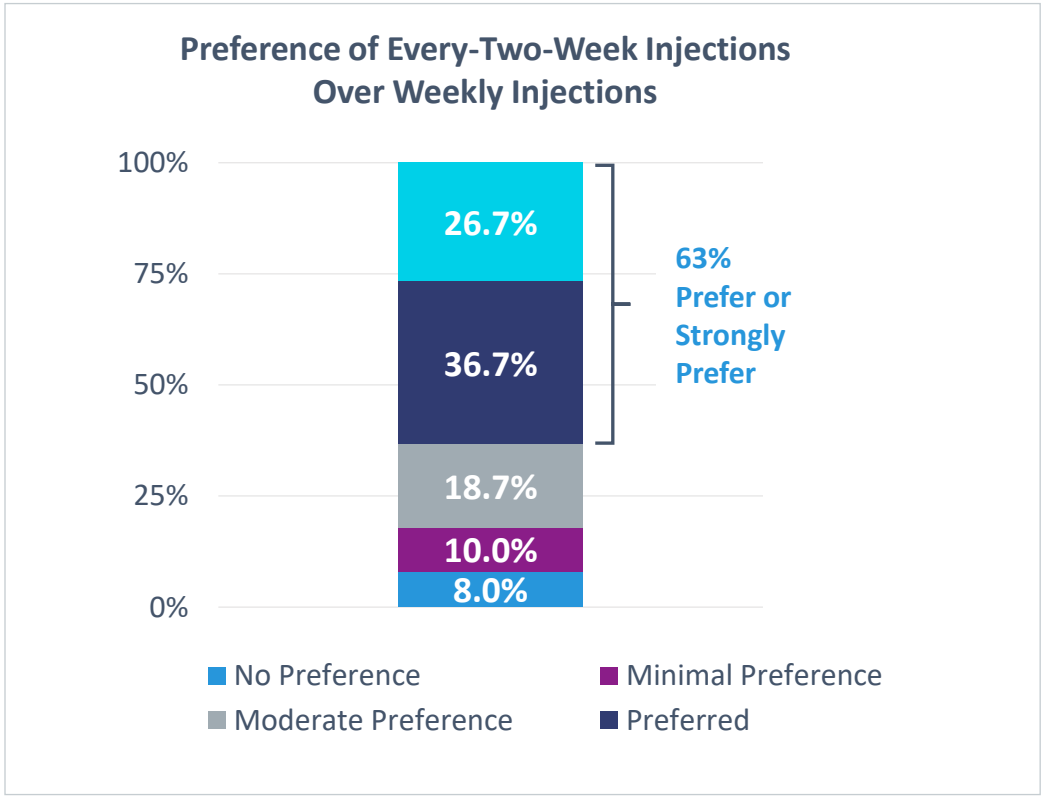
- Placebo response for MASH resolution is >2 fold higher with single reader vs 3-panel consensus
- Placebo response similar to ENLIVEN study for both fibrosis improvement and for MASH resolution

IMPLICATIONS:

- 3-panel consensus highlights treatment delta but dampens absolute response
- 3-panel consensus methodology can reproduce low placebo response in phase 3 trial

89bio REGENERATE re-analysis topline, July 2022.

Over 60% of T2D Patients Prefer or Strongly Prefer Every-Two-Week Injections



- Every-two-week dosing provides opportunity for physicians to optimize therapy to patient preference
- Compliance is important in treatment for chronic, asymptomatic diseases

89bio Source: Primary market research with 150 people with type 2 diabetes, 2019.
